

ABSTRACT OF THE DISCLOSURE

To provide The invention provides a liquid crystal device which can be cured in a relatively short period of time and which has a sufficient adhesion strength. A liquid crystal display device 100 has a liquid crystal layer provided between a pair of substrates 10 and 20, and a sealing material 52 which bonds the pair of substrates 10 and 20 to each other and which encloses the liquid crystal layer between the above substrates. The sealing material 52 contains a photocurable component and a thermosetting component, in which the maximum curing rate of the photocurable component is set to 60% to 95%, and the curing rate of the thermosetting component is set to 60% to 90%.
